

Your advantages

- Suitable for all Direct Injection petrol engines
- Perfect drivability & high performance
- -15% CO₂ versus petrol & -95% fine particle versus diesel
- Quick conversion & maintenance free
- Insensitive for weather conditions or autogas compositions
- 5 year warranty

Advanced Autogas Technology for Direct Injection Engines

Autogas system for Direct Injected petrol engines

- Vialle proudly offers the most advanced autogas-system worldwide available to you: its unique and highly innovative **DirectBlue** system. The **DirectBlue** system is specifically developed for direct injection petrol engines. Vialle is the first company that successfully developed a reliable technology that injects the autogas in liquid phase directly into the cylinders, similar to petrol. Therefore the engine performance and driveability is maintained.
- The heart of the **DirectBlue** system is the patented FSU4 ("Fuel Selector Unit") that switches smoothly between petrol and autogas. The FSU directs the selected fuel to the original petrol injectors on the engine. The driver can at any time select the desired fuel, either autogas or petrol by simply using the switch that is mounted to the dashboard. Direct injection petrol engines are used by major car brands such as Audi, VW, GM, Skoda, Seat, BMW, Ford, Peugeot, Mercedes. **DirectBlue** uses many original petrol high pressure fuel components such as high pressure fuel pump, injectors and pressure sensor. All these components are tested with autogas and certified under regulation EC 67-R01.

Range calculated with avg fuel prices dated May 2018

Warranty **DirectBlue**

Vialle offers standard a system warranty of 5 years.
